Homework #5  
Dr Su Yan  
Eng . Programming  
and application

```
import numpy as np
import matplotlib.pyplot as plt

x = np.linspace(0,5,100)
s = np.arange(100)
k = np.arange(100)
vxt = lambda x,s,k: (x*(k*s+1)-x*(k*s))/s
dxdt = vxt(x,s,k)

y = np.linspace(0,10,100)
s = np.arange(100)
k = np.arange(100)
vyt = lambda y,s,k: (y*(k*s+1)-y*(k*s))/s
dydt = vyt(y,s,k)

plt.plot(dxdt,dydt)
plt.show()

plt.plot(dxdt,s,label='Velocity in xdirection')
plt.legend()
plt.grid(True)
plt.show()

plt.plot(s,dydt,label='Velocity in ydirection')
plt.legend()
plt.grid(True)
plt.show()
```
